Who:

Integrated Recycling (IR) is a member of the Integrated Packaging Group (IPG) and is the link that enables waste plastic to be recycled and recreated as the Envire® range of advanced timber substitute products such as: bollards, fencing, outdoor furniture, decking, boardwalks and many industrial products including pallets and cores.

What:

Envire® Bollards are available in a variety of sizes both in square and round and can be drilled to fit a steel rod or chain, routed and made to receive a decorative or informative sign. The bollards are available with a variety of tops, including domed (for round bollards) pyramid, sloping or flat and in glow in the dark, lockable, safety and industrial ranges. Applications include: delineation of roadways, car parks, bike paths, sporting fields, work sites, danger zones, jetties and walk ways. Marine applications such as marker posts and buoys, aquaculture operations and on shoreline walls and steps.

Why?

Bollard products made from our recycled plastic composite mix will generally outlast those products traditionally made from wood. The durable qualities make them the most sensible, environmental and practical choice for your next project.

BOLLARDS- ROUND (DOMED TOP)

IR Code	Description (mm)	Colour/s	Weight
BOL 101	100 x 1200	Charcoal/Earth Brown/Enviro Green	8.50 kg
