Who:

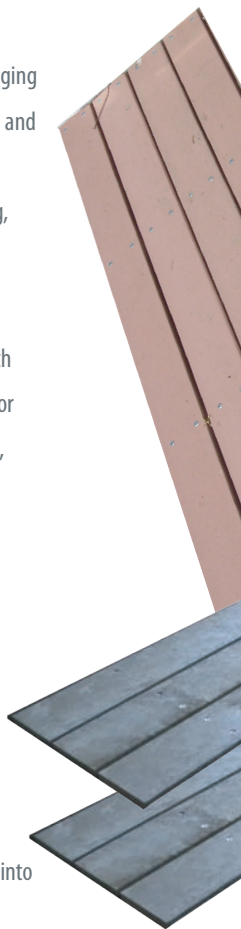

Integrated Recycling (IR) is a member of the Integrated Packaging Group and is the link that enables waste plastic to be recycled and recreated as the Envire® range of advanced timber substitute products such as: bollards, fencing, outdoor furniture, decking, boardwalks and many industrial products.

What:

IR makes Envire® fibre reinforced recycled plastic products such as boardwalks and decking from recovered plastics destined for disposal. Envire® Deck is longer lasting, continually recyclable, non-toxic, washable, easy to handle, non-leaching and resistant to breakage, rotting, pests and UV.

Why?

Decking products made from our patented recycled plastic composite will generally outlast those products traditionally made from wood. Due to the very low water absorption characteristics, Envire® Deck is also ideally suited to wet and humid environments, and has been extensively used on houseboats on the Murray River. It is now being incorporated into boardwalks in coastal, marsh and wetlands, where it is more suited than wood.

DECKING - PUBLIC WALKWAYS & BOARDWALKS
