Who:

Integrated Recycling (IR) is a member of the Integrated Packaging Group and is the link that enables waste plastic to be recycled and recreated as the Envire® range of advanced timber substitute products such as: bollards, fencing, outdoor furniture, decking, boardwalks and many industrial products.

What:

IR makes Envire® fibre reinforced recycled plastic products such as outdoor and indoor furniture from recovered plastics destined for disposal. Envire® furniture items range from benches to seats with backs with and without armrests; picnic tables; tables that cater for wheelchairs that can be bolted to a concrete slab or cemented into the ground as well customised and individual projects.

Why?

The appeal is not only environmental, but also practical. Envire® Furniture is manufactured to outlast and outperform timber. IR's recycled plastic products are good for many years because they don't rot or splinter or attract pests, such as termites — all shortcomings of traditional timber products.
